

Filtri Hydrocyclone Filtri ad Azione Centrifuga

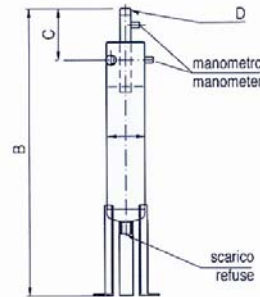

FILTRI IDROCICLONI AD AZIONE CENTRIFUGA CENTRIFUGAL WATER CLEANER FILTERS

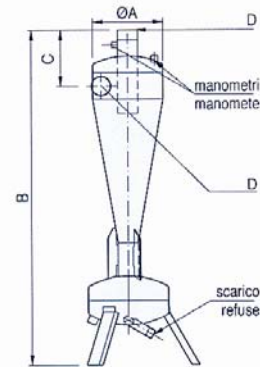

- Sistema di prefiltraggio per acque molto sabbiose o sature di particelle solide in sospensione da posizionare prima di una stazione di filtraggio.
Le acque in entrata, per effetto della forza centrifuga, depositano sulle pareti esterne del filtro le particelle più pesanti che si accumulano nel serbatoio sottostante.
 - Costruzione in acciaio inossidabile
 - Deposito di spurgo incorporato nella parte inferiore.
 - Peso ed ingombri contenuti.
 - 70 - 80% la percentuale di depositi eliminati dal liquido in uscita.
- *Pre-filtration system for rather sandy water or water containing a considerable amount of suspended solid particles to be fitted before a filtration unit.*
 - *The inlet water, due to the centrifugal force, settles on the outer sides of the filter the heavier particles settle in the container underneath.*
 - *Manufactured in stainless steel.*
 - *Discharge unit built in the bottom part.*
 - *Light-weight and compact 70- 80% is the percentage of dirt eliminated from the outlet water.*
